Advance Products & Systems, LLC shall repair or replace (within the limitations of such applicable express written warranty as may be issued by it) any product or portions thereof, which prove to be defective in workmanship or material for a period of 12 months from shipment date. The foregoing in lieu of all warranties, express or implied, and all other obligations or liabilities on the part of APS, on account of the product which it may sell. In no event shall APS be liable for consequential or special damages: nor except as it may otherwise specifically agree in writing, installation, or other work which may be done upon or in connection with the product by APS/ the distribution / dealer or others. THE LIMITED WARRANTIES PROVIDED IN THIS AGREEMENT AND THE OBLIGATIONS AND LIABILITIES OF APS ARE THE ONLY WARRANTIES MADE BY APS AS TO THE PRODUCT. APS MAKES NO EXPRESS OR OTHER IMPLIED WARRANTIES, BY COURSE OF DEALING, USAGE OF TRADE, MERCHANTABILITY, FITNESS FOR A PARTICULAR USE (WHETHER GENERAL OR SPECIFIC), OR OTHERWISE.

OTHER PRODUCTS AVAILABLE

• Flange Isolation Gasket Kits
• Kleerband® Flange Band Protectors
• Radolid® Nut & Bolt Protection Caps
• UBolt-Cote® and Atlas Pipe Support® Pads
• Casing Spacers and End Seals
• Innerlynk® Modular Mechanical Seals
• Gal-vo-plast® & Infinity® Wall Sleeves
• Foreman Nite Caps, temporary pipe plugs

TO ORDER PLEASE SPECIFY THE FOLLOWING

1. Flange Specification
   (ANSI/ASME, API, MSS SP44, BSI or Din Standard)
2. RTJ or Raised Face
3. Nominal Pipe Size, Pressure Rating and Bore Size
4. Teflon or Viton Secondary Spring Seal, if applicable
5. Operating Pressure, Temperature and Media
6. G-10, G-11, or Mylar Sleeve Material

Other Products Available

• Flange Isolation Gasket Kits
• Kleerband® Flange Band Protectors
• Radolid® Nut & Bolt Protection Caps
• UBolt-Cote® and Atlas Pipe Support® Pads
• Casing Spacers and End Seals
• Innerlynk® Modular Mechanical Seals
• Gal-vo-plast® & Infinity® Wall Sleeves
• Foreman Nite Caps, temporary pipe plugs

What is INTEGRA II SSAID® Gasket & why is it used?

The Patent Pending SSAID Gasket Kit provides a reliable PTFE seal at the flange bore. PTFE is well known for having excellent chemical resistance. By placing this seal at the bore, it enables the gasket retainer material to be impervious to the most aggressive media within the pipe. This extends the range of applications for the standard 316SS core, G10 and G11 laminates in aggressive environments, and eliminates the use of exotic core materials in the retainer, saving time and money. The seal has a unique, patent pending method of being secured in the retainer that prevents the seal from dislodging during handling or operation. The seal fits tightly on the retainer ID, and wraps around both sides. The edge groove on one side is equipped with Kammprofile grooves. The PTFE is compressed into these grooves when installed between two flanges. This provides radial retention of the seal during operation, preventing the seal from being sucked into the pipe bore. The SSAID is available with a secondary seal such as a Teflon Spring Seal or Viton O-Ring seal. The gasket is suitable for sizes and pressure classes ranging from ½” to 42” and Class 150 ANSI to 10,000# API. For other gasket sizes, please contact APS Sales.

Features & Benefits:

1. Exceptionally dependable for isolating and sealing purposes for Severe Service applications.
2. Extends the range of applications for the standard 316 SS core, G10 and G11 laminates in aggressive environments.
3. Specifically, suitable for applications with high Chloride content or other highly corrosive media.
4. Zero-free leaks for high sulfur content crude oil or H2S gas fugitive emissions, proven through multiple applications.

Applications:

1. Flange isolation with true cathodic protection.
2. Isolating between flanges of dissimilar metals to prevent galvanic corrosion.
3. Wellhead isolation from inter-connected flow lines.
4. Mating mismatched dissimilar flanges.
5. Eliminate turbulence and flow-induced erosion between ring-joint (RTJ) flanges.
6. Accommodates for potential irregularities in the flange face near the bore, such as pitting from corrosion from prior service.
7. To seal between flanges subjected to vibration/cavitation.
8. Eliminate corrosion from forming in the cavities between RTJ flanges where intense modes of hostile chemicals may be present.

G-10/G-11 Washers

PTFE (ID Seal)

Pressure energizing, concaved ID to enhance sealing at higher pressures. Resists creep for a higher sealing pressure over time. High compression rate at installation accommodates for potential irregularities in the flange face, such as pitting from corrosion from prior service.

Temperature Range: -250° F to 450° F

PTFE (Spring-Energized): A radial load is provided by the helical wound spring. Encapsulation in the seal groove eliminates creep and cold flow.

Temperature Range: -250° F to 450° F

Viton (O-Ring): Designed for general Oil and Gas applications

Temperature Range: -75° F to +400° F

Insulating Sleeve Options

1. 6-10 G-11 - Glass Reinforced Epoxy tubing is suitable for continuous exposure to 350° F (400° F for G11). This material is an epoxy laminate that offers excellent resistance to crushing, cracking, breaking and thread pinch.

2. Mylar - Spiral wound Mylar is a general-purpose material recommended for bolting applications with flange temperatures below 100° F. This material has general face resistance to crushing, cracking, breaking and thread pinch.

Isolating Washer: Coated, Hardened Steel Washer

G-10/G-11 - 1/16” (.015) thick washers cut to standard SAE washer dimensions.

Steel Washer Options

1. Zinc Steel - Zinc-Plated Steel washers cut to standard SAE washer dimensions.
2. Stainless Steel - Stainless Steel washers cut to standard SAE washer dimensions.
INTEGRA II SSAID®

**What is INTEGRA II SSAID® Gasket & why is it used?**

The Patent Pending SSAID Gasket Kit provides a reliable PTFE seal at the flange bore. PTFE is well known for having excellent chemical resistance. By placing this seal at the bore, it prevents the gasket from dislodging during handling or operation. The seal fits tightly on the retainer ID, and wraps around both sides. The edge groove on one side is equipped with Kammprofile grooves. The PTFE is compressed into these grooves when installed between two flanges. This provides radial retention of the seal during operation, preventing the seal from being sucked into the pipe bore. The SSAID is available with a secondary seal such as a Teflon Spring Seal or Viton O-Ring seal. The gasket is suitable for sizes and pressure classes ranging from ½” to 42” and Class 150 ANSI to 10,000 API. For other gasket sizes, please contact APS Sales.

**Features & Benefits:**
